One provider for all of your DRaaS needs,
your complete solution to recovery

We live in a world where it is no longer an option for organisations to operate without access to their IT systems and data. But not every business or system is the same and often require differing levels of security, flexibility and urgency, which is why we offer a range of Disaster Recovery-as-a-Service (DRaaS) solutions.

3 SOLUTIONS TO SUIT YOUR NEEDS AND BUDGET

Recovery: Rapid

For mission-critical IT systems and applications that cannot withstand loss or downtime for even a matter of minutes. This solution enables rapid recovery in a high-quality production environment.

Recovery: Replicate

For high-impact IT systems and applications that must be restored within minutes to hours after a disruption, regardless of technology complexity. This solution offers real-time replication with true failover recovery.

Recovery: Restore

For applications and files that don't warrant immediate recovery, this solution runs scheduled replication into the cloud, so that everything is easily accessible and restored when you need it.

DRaaS SOLUTIONS FOR THE 'ALWAYS-ON' BUSINESS

Crucial to a high performance disaster recovery plan is having the right mix of solutions in place to meet your organisations need for speedy recovery at the best value. With this in mind EBC Group has created a suite of Disaster Recovery-as-a-Service (DRaaS) solutions to help organisations achieve their objectives.

DRaaS SOLUTIONS FOR EVEN THE MOST COMPLEX IT ENVIRONMENTS

EBC Group have vast experience handling large-scale deployments, recovering both physical and virtual machines and various replication technologies, and securing all environments for comprehensive data protection. Through our flexible and proactive approach, we give your organisation the ability to focus on your core activities and initiatives while maintaining complete confidence in your recovery plans.

Our Disaster Recovery Suite includes:

RECOVERY: RAPID

Securely and reliably store your backups in the cloud – using either your own private storage within EBC Group's private cloud infrastructure or shared storage using Veeam Cloud Connect. This is the solution for businesses that want the real-time availability of their data, systems and applications, and can't afford to be without access to it for even a few minutes. A fully managed service which offers your business a 'Real RTO' of just a few seconds.

Recovery: Rapid

FULL PRODUCTION

App-aware or native replication

0 RPO, transaction-consistent

Full Production

Source Site

Target Site

Recovery Process
- Start application
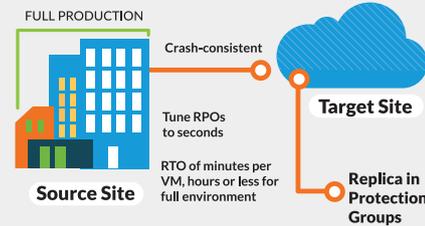

RTO
Seconds to minutes

RECOVERY: REPLICATE

Recovery Replicate provides a solution that can be easily tailored to handle physical and virtual machines as well as existing networking and security protocols, creating a real-time replication for even the most complex IT systems.

Recovery Replicate protects diverse, high-impact data and applications across various hardware and operating system technologies, providing full application recovery in as little as 2 hours after a disruption. With this solution, you get fast, consistent recovery for modern and legacy applications that rely on both physical and virtual machine

Recovery: Replicate

FULL PRODUCTION

Crash-consistent

Tune RPOs to seconds

RTO of minutes per VM, hours or less for full environment

Source Site

Target Site

Replica in Protection Groups

Recovery Process
- Boot VMs
- Start application
- Swing Traffic

RTO
4 hours or less for full environment

RECOVERY: RESTORE

Recovery Restore allows your business to restore and run services from their backups in the cloud, as well as quickly restore files and VMs back to their source site. The cloud-based storage is secure and encrypted so can quickly scale on demand to resources that are guaranteed to be available.

Recovery Restore protects your files and applications with scheduled replication into the cloud using Veeam technology. When needed, you can restore applications to run at your own site or in EBC Group's cloud environment.

Recovery: Restore

FULL PRODUCTION

Point-in-time backup-based replication

RPO of hours, based on frequency of backup schedule

Can restore back to production site

Source Site

Target Site

Archive Storage

Recovery Process
- Restore backup to production storage
- Boot VMs
- Start application

RTO
24 hours or less for full environment
